

Little Star collective Membership Form

In order to meet the demand for pure, raw honey from a reliable source, Little Star Bee Sanctuary formed a collective to maximise benefits to the community, local beekeepers and raise the profile of ethical and natural beekeeping practices.

Our collective honey is sourced sustainably, local to the Nambucca Valley on the Mid North Coast of NSW, from hives managed using our natural beekeeping principles and education practices. Our preference is working with beekeepers that use non-migratory processes.

The current majority of collective members are previous Little Star Bee Sanctuary course participants, which demonstrates our commitment to collaboration and community for the future of the beekeeping industry.

All collective members agree to **not** use the following practices:

- supplementary feeding
- use of antibiotics for hive health
- use of chemical control of pests and diseases

Little Star Bee Sanctuary collective members place the bee's needs at the forefront of their beekeeping, which enhances genetic line breeding to support natural resistance and resilience of diseases and pests - ultimately resulting in healthier hives.

Each collective member will need to provide a story about you, your farm/ place and practice of bees, with a photo for our website and marketing purposes.

Bee the change...

Your Story (Your Beekeeping journey, where you live, location, practices - no more than 250 words)

Declaration

I have read the above information and declare that I will abide by the above conditions of the Little Star Bee Sanctuary Collective. I have attached my/our story below and an image with this document.
